Summary: The Geological Survey of Norway is in the process of making an inventory of hard rock aggregate deposits in coastal Norway. This report contains a catalogue of Norwegian coastal quarries presently in production and potential production areas along the coast of southern Norway. 9.8 million tons of aggregates were exported to Europe in 2001 and ca. 2 million tons were used in the offshore industry (continental shelf).

Hard rock aggregates, sand and gravel and armourstone	
Maps of quarries and potential deposits of hard rock aggregate and sand/gravel in South-Norway	20

## INTRODUCTION

The Norwegian production of hardrock aggregates was in 2001 ca.36 million tons and sand/gravel 15 million tons.

9.8 million tons of aggregate and 0.3 million tons of sand and gravel were exported with an export value of NOK 425 million or 54 mill EUR from 20 hard rock aggregate- and 4 sand and gravel producers from Svelvik in Vestfold county to Møre and Romsdal (statistics compiled by NGU and the producers), pages 5 - 7. Export of hard rock aggregate represents 27 % of the total hard rock production. The majority of the quarrying companies are relatively small, catering essentially for local needs. There are, however, a number of major players including Oster Pukk og Grus A/S, NorStone, Kolo-Veidekke A.S, NCC Råstoffer, Halsvik Aggregates A/S and Franzefoss Pukk A/S. These companies each have an annual production in the order of 1-2.5 million tons. The largest individual aggregate quarry (gneiss) owned by Norsk Stein A/S had a production of approx. 2.8 million tons in 2001. Export of aggregates for use offshore, mostly in Norwegian sectors of the North Sea was 1.9 million tons in 2001. The sand- and gravel export is from three quarries in Rogaland and one in Sogn and Fjordane county.

Norway is probably northern Europe's principal **hardrock** country being composed almost entirely of Precambrian and Palaeozoic igneous and metamorphic rocks. Norway has a long, indented and rugged coastline where a considerable variety of rocks suitable for aggregate production are well exposed. Deep-water anchorage, low tidal range and a well-developed infrastructure allow for planning of harbour facilities for medium-large size bulk carriers. Norway has an attractive investment and taxation climate and overseas investment is encouraged. National and local authorities are aware of the potential for the development of large coastal quarries (super-quarries) designed for the production and export of rock aggregates. The Geological Survey of Norway (NGU) is undertaking a number of investigations of potential coastal sites for such quarries, so that local government planners, can classify such sites for future development. In Bremanger commune 2 new quarries are planned and will start production of green sandstone in 2001/2003 with PSV from 58 to 62. Bremanger Quarry AS has started a small export production to Netherlands in 2001. A new sandstone quarry is planned in Flora commune.

NGU is planning to map, together with counties, local authorities and industry the potential for new coastal rock units for which environmental, topographic and transport criteria would allow quarrying.

The Gravel- and Aggregate database has been on internet with digital maps for zooming in the quarries:

<http://www.ngu.no/grusogpukk> or <http://www.ngu.no>

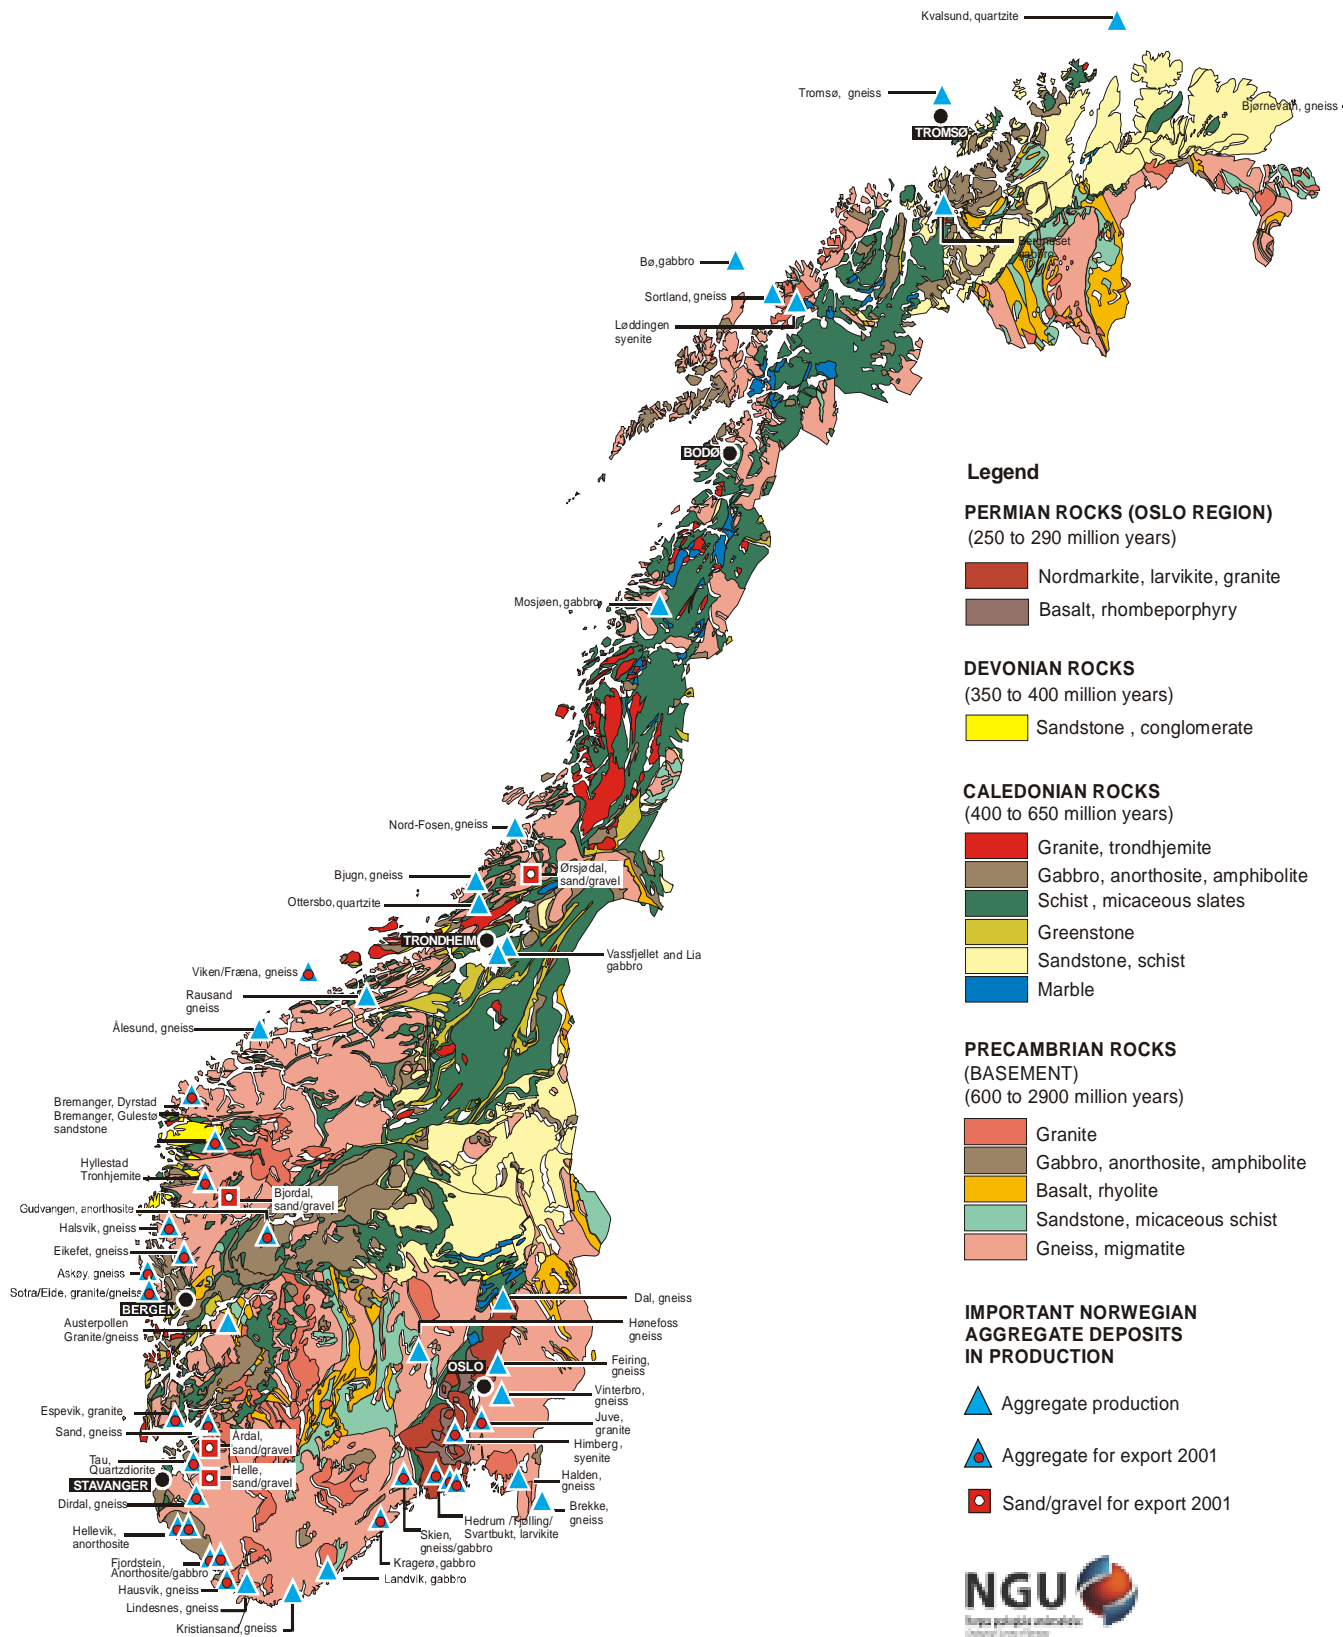

The next report will come in April 2003.

Trondheim, 20. April 2002

# BEDROCK MAP OF NORWAY WITH IMPORTANT AGGREGATE DEPOSITS

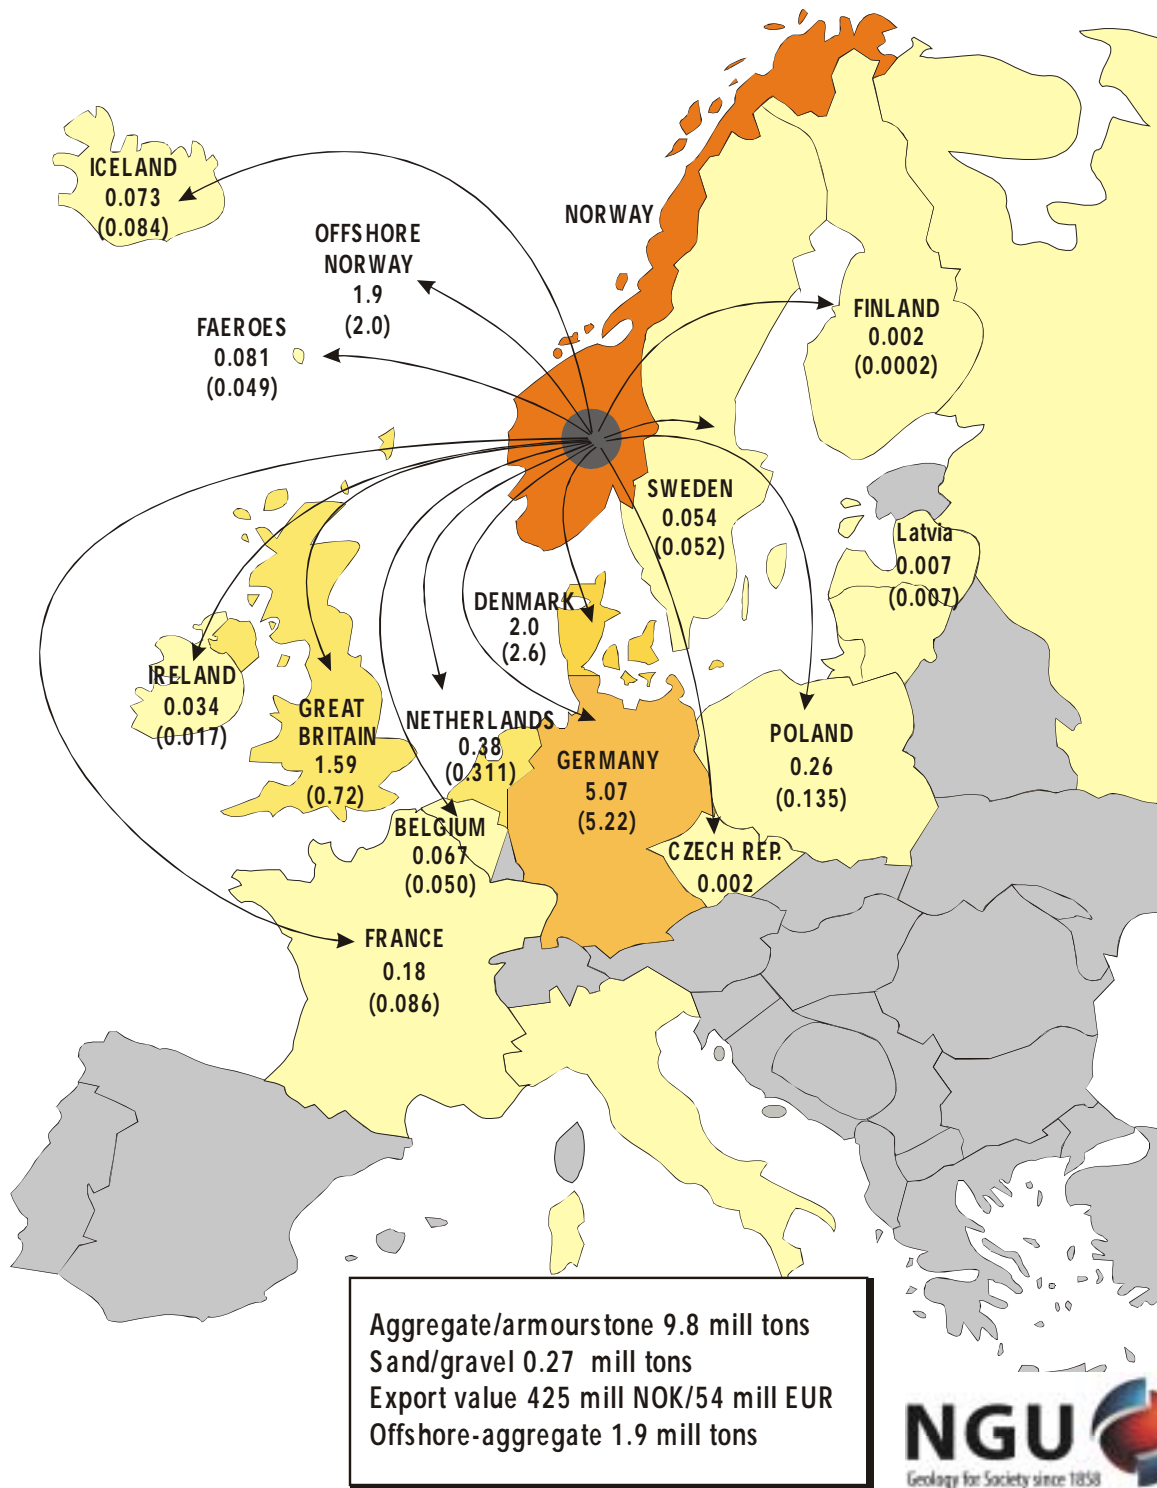

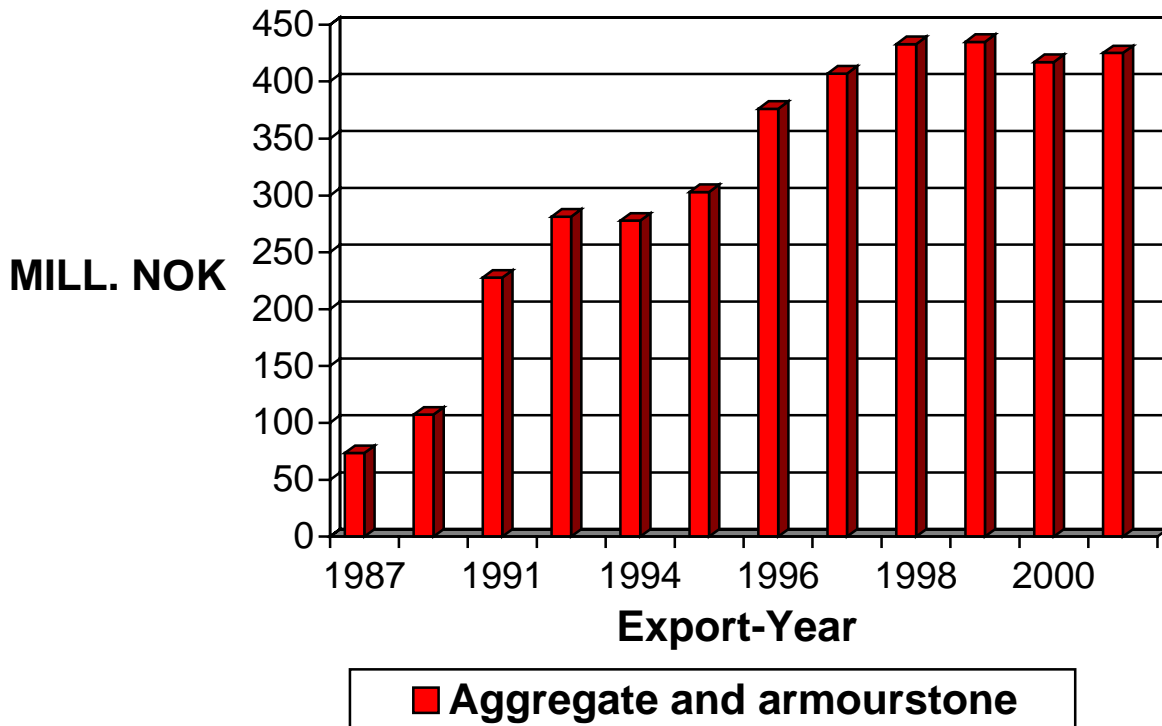

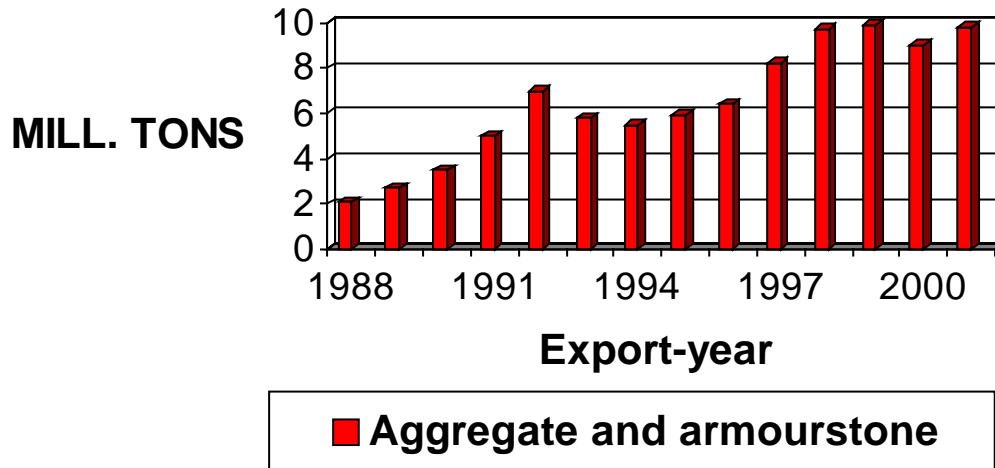

# NORWEGIAN AGGREGATE FOR EXPORT IN 2001

Total production 11.7 mill. tons and export 9.8 mill. tons aggregate, armourstone, sand and gravel and in addition 1.9 mill. tons aggregate for offshore use.

Production values in parentheses are from 2000.

## AGGREGATE EXPORT 1988-2001

NORWEGIAN QUARRIES AND POTENTIAL AREAS ALONG THE COAST OF SOUTH NORWAY. HARD ROCK AGGREGATES AND ARMOURSTONE. NUMBER REFERENCE TO ENCLOSED MAPS
