## 6. VEDLEGG

Vedlegg 1. Analyseliste.

Vedlegg 2. Geokjemiske kart for Nordland og Troms.

Al-innhold i bekkevann.

Ca-innhold i bekkevann.

Fe-innhold i bekkevann.

K -innhold i bekkevann.

Mg-innhold i bekkevann.

Na-innhold i bekkevann.

Si-innhold i bekkevann.

Sr-innhold i bekkevann.

Zn-innhold i bekkevann.

Ledningsevne i bekkevann.

## 7. LAGRING AV DATA

## 1. INNLEDNING

Norges geologiske undersøkelse utførte i tidsrommet 1986-1988 en regional kartlegging i Nordland og Troms i samarbeid med de respektive fylkeskommunene. Plan for kartleggingen er offentliggjort i NGU-rapport 86.204. Statusrapport pr. 21.11.86 er dessuten gitt i NGU-rapport 86.214.

Prøvetaking av løsmasser, bekkesedimenter og bekkevann (overflatevann) ble fullført sommeren 1986. Totalt ble det samlet inn ca. 20 tonn materiale fra 1310 lokaliteter.

Denne rapporten beskriver resultatet av ICAP-analysen av bekkesedimentenes finfraksjon.

## 2. METODER

### Feltarbeid

Prøvetettheten ved den geokjemiske kartleggingen i Nordland og Troms er på ca. 1 prøve per 40 km<sup>2</sup>.

Bekkevannprøvene ble innsamlet på følgende måte:

- Innsuging av vann i plastsprøyte (Millipore, bestillingsnr. XX11 050 05)
- Påsetting av engangsfilter med maskevidde 0.45 mikron (Millipore, bestillingsnr. SLHA 025 OS)
- Filtrering ned i prøveflaske

Vannprøvene ble surgjort med suprapure HNO<sub>3</sub>; 1 dråpe pr. 10ml prøve. Syretilsatsen ble foretatt etter feltdagens avslutning. I alt ble det samlet inn bekkevann fra 368 lokaliteter.

Prøvene ble randomisert ved hjelp av et edb-program før analysering. Prøvene er dermed analysert i tilfeldig rekkefølge. Dette er gjort for å eliminere virkningen av eventuelle systematiske feil eller forurensninger som måtte oppstå under analysearbeidet.

### Analyse

Ved hjelp av ICAP-metoden (Inductively coupled argon plasma spectrometry) ble innholdet av 21 grunnstoffer bestemt. Analyseinstrumentet er et plasmaspectrometer med betegnelsen Jarrell-Ash 975 ICAP Atom Comp. (Ødegård 1983). Ledningsevne ble målt i laboratoriet ved NGU.

### Hovedelementer:

|                |                |               |
|----------------|----------------|---------------|
| Al (aluminium) | K (kalium)     | Na (natrium)  |
| Ca (kalsium)   | Mg (magnesium) | Si (silisium) |
| Fe (jern)      | Mn (mangan)    | Ti (titan)    |

### Sporelementer:

|                |               |                |
|----------------|---------------|----------------|
| Ba (barium)    | Cu (kopper)   | Pb (bly)       |
| Be (beryllium) | Li (lithium)  | Sr (strontium) |
| Cd (kadmium)   | Mo (molybden) | V (vanadium)   |
| Co (kobolt)    | Ni (nikkel)   | Zn (sink)      |

### Databehandling

Koordinatfesting av alle prøvelokalitetene, som var markert på kart i målestokk 1:250 000 ble utført i UTM-nettets sone 33 ved hjelp av digitaliseringsutstyr (Calcomp 9100) og registrert på NGUs datamaskin (HP-3000).

Geokjemiske rådata- og anomalikart er laget ved hjelp av en edb styrt plotter(HP7585B) i målestokk 1:3 000 000. Rådatakartene har også et diagram som viser den kumulative frekvensfordeling av vedkommende element.

## 3. RESULTATER

### Kvalitetskontroll

Det er tatt 34 duplikatprøver. Disse utgjør 3% av alle prøvene. Figur 3 viser plott av duplikatprøvene for de enkelte grunnstoffer. Plottene viser at reproduserbarheten for prøvetaking og analyse av de enkelte element varierer noe. Reproduserbarheten er spesielt dårlig for Mn, Ti, Ba, Be, Cd, Co, Cu, Li, Mo, Ni, Pb, V.

### Tabeller og kart

Analyseresultatene er gitt i vedlegg 1. Geokjemiske rådatakart finnes i vedlegg 2. En statistisk oversikt over analyseresultatene er gitt i tabell 1.

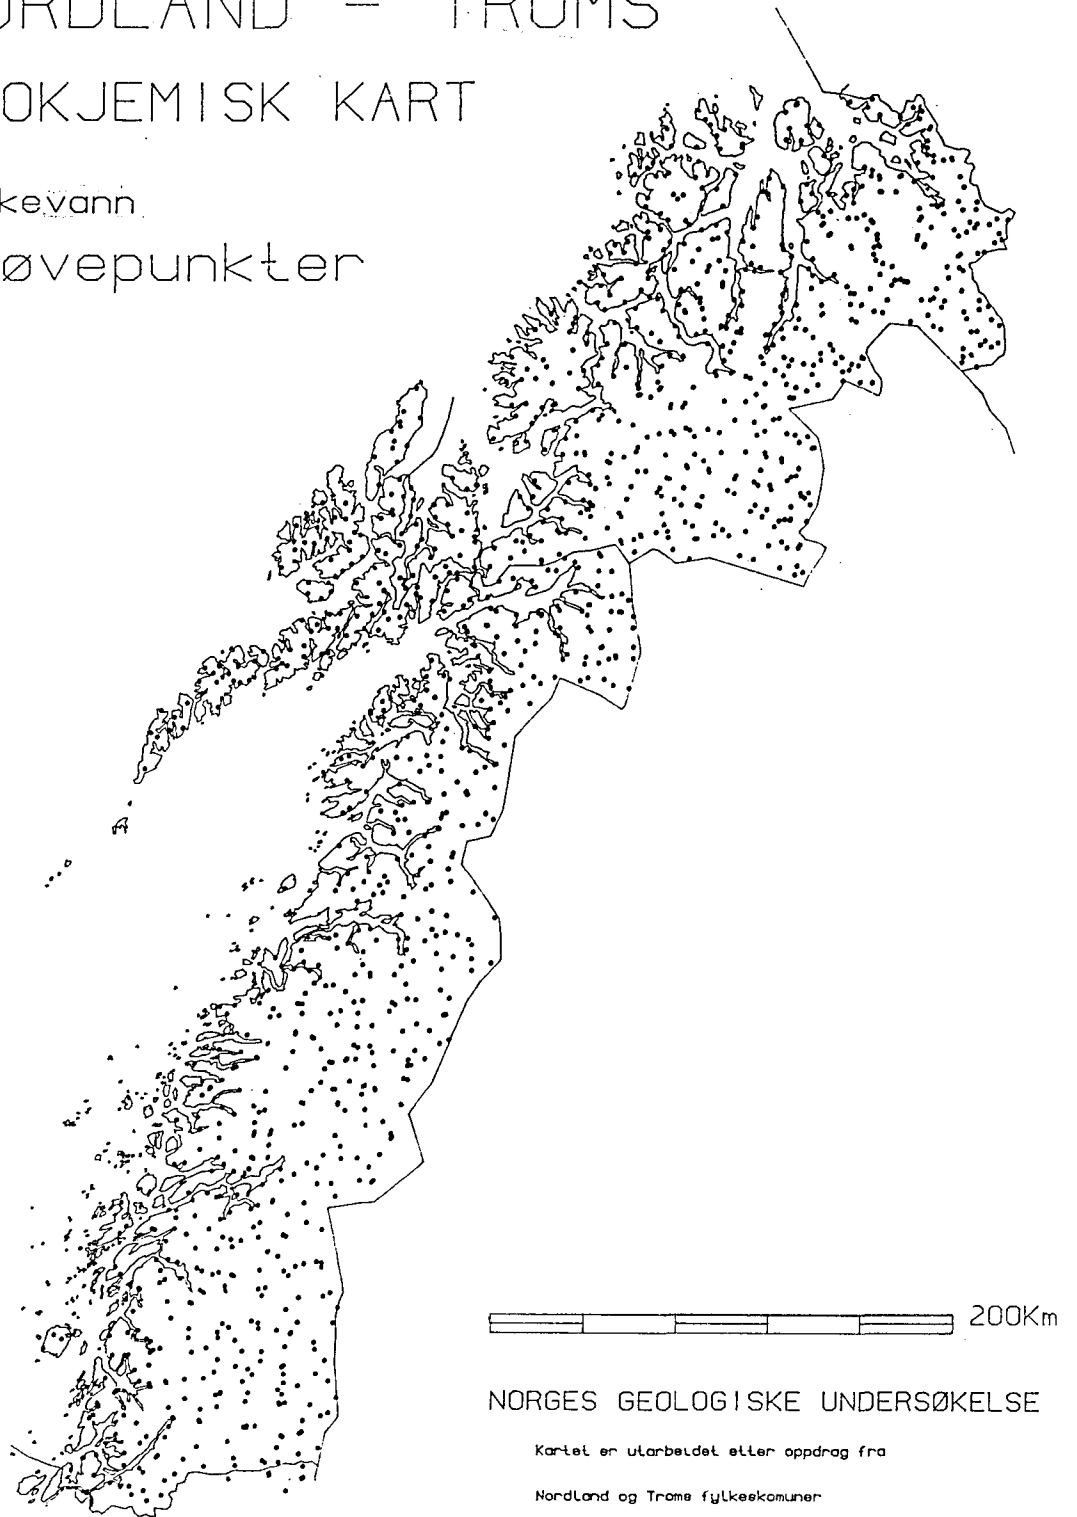

### Kommentarer

Analyseverdiene for Mn, Ti, Ba, Be, Cd, Co, Cu, Li, Mo, Ni, Pb, V er forkastet ved kvalitetskontrollen. Disse dataene er derfor ikke kartfremstilt.
